## Vortec Cold Air Pistol

The Vortec Cold Air Pistol offers an ergonomic, easy to use and less costly alternative to the Cold Air Gun for intermittent spot cooling.

The lightweight pistol features an integral trigger mechanism for an on/off squeeze action that can be aimed at the target site; and provides cool air as low as 0 deg F at a flow rate of 9 cfm.

The pistol is ideal for repair shops, industrial MRO, and machine tool shops, or anywhere that 100 psi compressed air is available and intermittent spot cooling is needed.

The cold air pistol will cool parts quickly and with no liquid mess, so that your jobs can be started and completed faster.

### Specifications:

- 100 psig incoming compressed air
- 15 scfm compressed air consumption
- Cold air flow rate: 9 cubic feet per minute
- Cold air temperature: 0 deg F
- Noise level at 3 feet: 78 dB
- Inlet: ¼"-18 female NPT
